

NOVACAP FINANCIAL TECHNOLOGIES

Principal Strategist — 90-Day FinTech Arbitrage Academy

Principal Strategist — 90-Day FinTech Arbitrage Simulator

A ruthless Python training simulation. Write code. Execute trades. Survive the audit.

The Pitch

You're a FinTech Arbitrage Specialist at NovaCap Financial. The year is 2026. You have 90 days to prove you can build, execute, and audit algorithmic trading systems — or you're out.

This is not a video course. This is not a tutorial. This is a **simulation** that generates daily trading challenges, evaluates your code with AST static analysis, runs hidden test suites, and **will not let you advance until you score 100**.

What Makes This Different

OTHER TRAINING	PRINCIPAL STRATEGIST
Watch videos	Write code under pressure
Drag-and-drop UI	Real Python against a live exchange
Multiple-choice quizzes	AST code audits + hidden test suites
Self-paced, no standards	CMA/SOCPA/IFRS compliance enforced
"Good enough" to pass	Must score 100/100 to advance
Requires pip install	Zero dependencies — run it

What You Get

- **1 file** (`arbitrage_academy.py`) — ~4,000 lines of pure Python
- **90 days** of progressive training (Data Ingestion → Arbitrage Logic → SOCPA Compliance)
- **Live mock exchange** on `localhost:8080` with BTC, ETH, USDT, EUR/USD
- **Double-entry SQLite ledger** with full P&L tracking
- **AST static code auditor** — 9 check categories
- **EOD evaluation engine** — subprocess tests + ledger verification
- **Dark-themed web dashboard** on `localhost:8081`
- **CLI interface** with clinical Principal Strategist persona
- **Hand-crafted Days 1–3** + procedural generator for Days 4–90
- **Zero external dependencies** — Python 3.8+ stdlib only

How It Works

Each day: 1. Type `start` — exchange launches, workspace generates, briefing appears 2. Write your solution in the generated boilerplate 3. Run it against the live exchange — fetch data, calculate, log to ledger 4. Type `eod` — AST audit → hidden tests → ledger verify → **score** 5. Score 100? Type `advance`. Score less? Fix your violations.

Tech Specs

REQUIREMENT	DETAIL
Python	3.8 – 3.13
Dependencies	Zero. Zip file = <code>python arbitrage_academy.py</code>
Ports	8080 (exchange) + 8081 (dashboard)
OS	Windows, macOS, Linux
Lines of code	~4,000 in a single file

REQUIREMENT	DETAIL
Total curriculum days	90 with procedural fallback

Pricing

TIER	PRICE	BEST FOR
Individual	\$79	Solo devs, students, self-learners
Professional	\$249	Freelancers, commercial use
Academy (30 seats)	\$750	Bootcamps, classrooms, training programs
Enterprise	\$2,500+	Firms, custom dev, white-label

30-day money-back guarantee. If it doesn't work for you, get a full refund.

FAQ

"Do I need to install anything?" No. Python 3.8+ ships with everything you need.

"I'm a beginner. Is this for me?" It's challenging. Days 1–3 are accessible to intermediate Python devs. The difficulty ramps significantly. If you can write functions with type annotations and handle exceptions, you're ready.

"Can I see it running before I buy?" The dashboard runs on `http://localhost:8081` — start it and see the live exchange, ticker feed, and ledger before writing a line of code.

"What if I get stuck?" Individual license includes 30-day email support. Academy/Enterprise tiers include dedicated support SLA.

"Is this financial advice?" Absolutely not. All market data is synthetic. This is a code training simulator.

[Buy Now — \$79 (Individual)] | [Buy Now — \$249 (Professional)]
